WATER PURIFICATION KIT

## did you know these water facts....

- unsafe drinking water is the biggest killer of children under the age of 5?
- more than 1.1 billion people worldwide still have no access to clean and safe drinking water?
- 50% of hospital beds throughout the world are taken up by people suffering from water-borne diseases such as typhoid and cholera?

**Left:** Common pathogenic bacteria found in water supplies include: E-coli, Salmonella, Legionella, Cholera, Salmonella Typhi (Typhoid), Shigella, Klebsiella and water-borne cysts.

The solution: simple and highly effective water purification kits that remove 99.99% of disease causing bacteria

## How cleanwater kits work...

Using the well proven technology of a ceramic candle filter, impregnated with colloidal silver, unsafe and impure drinking water is transformed into purified water within minutes.

As the dirty water passes through the ceramic filter the silver content kills 99.99% of harmful bacteria and cysts.

Overnight a dustbin full of unclean water is transformed into one of pure drinking water.

**Technical:** On contact with water the silver releases small quantities of positively charged metals ions. These ions are taken into the enzyme system of the bacteria's cell and thereby neutralize it.

## How effective are cleanwater kits?

Local school-children from Kibanda, Uganda, who previously drank from the lake, were known to regularly suffer with vomiting and diarrhoea. Absenteeism from one local school often ran as high as 50%. After the introduction of Cleanwater kits, daily school attendance has increased to as much as 95%. The success of tests in Africa proved the sheer simplicity and effectiveness of the Cleanwater kits.

## The challenge that led to the vision

Cleanwater was birthed in 2006 from a Watchmen International project called LifeWater. The challenge was simple: to discover how we could provide clean and safe drinking water to families, schools, and local communities at the point of use. This was achieved through the design and development of Cleanwater kits.

## Why not buy into our vision?

Working closely with Watchmen International, we are impacting thousands of lives in developing nations. This is achieved through working with national teams who distribute Cleanwater kits to schools, orphanages, hospitals, clinics, churches, and refugee camps providing clean and safe drinking water to people in need.

We would like to give you this opportunity to join us and help change the lives of thousands more people by simply giving them access to clean water and education.
